Protect the Investment You Made in Solar

Solar-Log® Solar Plant Performance Monitoring

Solar-Log WEB Enerest™

Keeping a Watchful Eye on Your Solar Plant

Solar-Log WEB Enerest™ is a professional online platform for the efficient monitoring and administration of solar plants. Plants that are not monitored can realize a significant loss in power production, which negatively impacts financial return. A service agreement with a solar provider, plus reliable Solar-Log® monitoring, is the best way to ensure that the system is functioning, protecting your plant against power loss.

Maximize Energy Production

Solar-Log® sends immediate notifications when there is an error with one of your inverters or panels. Immediate detection means your solar provider can react quickly and correct the issue as soon as possible.

Production Forecast

Reference values predict how much energy your plant is expected to produce. If your plant is producing less than expected, the issue will be detected by Solar-Log®.

Hassle-free Service

Solar-Log® offers remote configuration and many issues can be corrected without having to visit the site. That means less interruption for you.

Tailored Reports

Receive automatic emails with daily, weekly, monthly, or yearly production values, so you are always informed about your plant's performance.

Energy Usage Monitoring

Solar-Log's consumption monitoring provides valuable insight into building usage. Once you understand how electricity is being used, you can adjust to lower electricity costs.

Solar-Log WEB Enerest™: Available features and functionality differ between subscription levels. Talk to your solar provider to find out which best suits your needs.

Showcase Your Solar Plant

The Solar-Log WEB Enerest™ Dashboard is a great way to publicly showcase your contribution to environmental sustainability. The Solar-Log® Dashboard is available with Solar-Log WEB Enerest™ L and XL and provides a dynamic display of important plant information such as energy yield, CO_2 savings, and financial earnings.

View Current and Historical Power Production

Visualize your solar plant production information with easy-to-read charts and graphs. View daily, monthly, and yearly solar power production.

Solar Plant Data in the Palm of Your Hand

View how much power your plant is producing on the Solar-Log WEB Enerest™ app, available with Solar-Log WEB Enerest™ L and XL, on Apple and Android devices.

> " Since Solar-Log® is monitoring my solar plant, I can sit back and relax, knowing my installer can remotely monitor status messages in real-time."

Solar plant owner, G. Neumann
