

Solar-Log® Installation Best Practice

Solar-Log 2050 - Commercial Revenue Grade Meter

On Site Best Practices

- [Download installation manual](#) from SolarDataSystems.com
- Have an electrician on site
- Have a laptop and Ethernet cable on site - a Solar-Log cannot be configured without a laptop
- Place enclosure/logger at eye level if possible to easily access the touchscreen on the Solar-Log®
- Be early for device detection and test data transfer while the sun is shining
- Keep CTs away from transformers if possible
- Call the Solar-Log® technical support team for configuration and support. 203-702-7189, option 2

Top Challenges On Site

- Inverters must be up and producing in order for the Solar-Log to detect them
- Voltage taps do not match CT phases - Indicator: RGM reads +-20-30% off from inverters
- CTs are installed backward
